

A.I. ARTIST LOOKING FOR ADDED VALUE

Virtual A.I. driven characters are the pop stars of the future. But how do we make sure that these avatars will enrich our human creativity – instead of becoming a threat?

Who is Fi?

Fi is a virtual pop star who is built with A.I. and 3D technology by the Thunderboom Records Foundation – the world's first record label for robots.

To ensure that Fi becomes an enrichment rather than a replacement, we are looking for musicians who want to join us and explore the creative potential of A.I. by co-creating music together with Fi.
